## Invitation

to the aqua pro from 7 - 9 February 2024 in Bulle / FR at lake Gruyère

At aqua pro, you will have the opportunity to experience our latest product highlights up close. Visit our stand 20-89 in hall 20 and explore the world of innovative solutions for the trends of tomorrow.

The digital transformation in the wastewater and water market will continue in 2024. New concepts such as the smart city or the sponge city are rapidly gaining in importance due to environmental changes. These challenges require innovative solutions. We will be presenting the LDM controlled slide gate valve as a new product on the market. Another highlight at the stand is the INKA street drainage system, which separates dirty from clean rainwater thanks to the self-sufficient gate valve and only feeds it to the WWTP when it has the necessary capacity, and does so fully automatically.
